LIGHT TRANSMITTANCE METER
CODE 5804-LT21

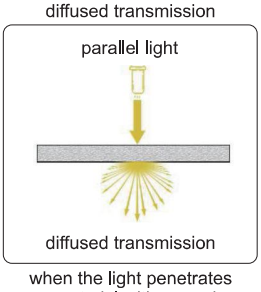

- Suitable for light transmittance testing of various “regular transmission materials”, such as building glasses, auto glasses, transparent films, plastic products, etc.
- With the design of parallel optical path of the light source and condensed light of the receiver, it can measure up to 100mm thickness
- Can measure the high transparent materials such as K9 glasses
- Two measuring modes, fixed base and handheld
- Conforming to CIE photopic luminosity function

when the light penetrates a flat and evenly textured transparent material, the light does not change its direction

when the light penetrates a material with a rough surface or uneven texture, the light spreads out
